

The field the firm left blank, then used: functional obsolescence, September to commitment

In September 6% of Norway mobile homes and 7% of houses carried any functional obsolescence. By commitment 72% of mobile homes and 9% of houses did. Half of the 831 value changes were made in this one field, with no inspection recorded. In Sumner, where the same firm has no revaluation to defend, 40% of houses carry one.

Who carries a deduction in the field

808 building lines on 416 parcels had the field changed between the published roll and commitment, by the percentage entered

Sources: John E. O'Donnell & Associates public property cards, Norway, main dwelling line per parcel, as published in August 2026 (cards pulled before 1 September) and as pulled 6 October 2026 after the 1 October commitment; Sumner cards as published 12 September 2026. Functional obsolescence is the card's F.Obs. column: the share of cost kept after a deduction for something wrong with the design or layout; 100 means no deduction. Right panel counts every building line whose F.Obs. changed, by class of parcel.
